

Teller County Plumbing Contemporaneous Review

Mandated by the
State of Colorado
Department of Regulatory Agencies

EFFECTIVE DATE: January 1, 2020

Teller County will conduct onsite inspections for compliance with C.R.S. 12-155-108 and 12-155-124, when applicable, during a requested plumbing inspection. Prior to the inspection, the inspector will verify that the listed electrical contractor has a current Teller County registration on file with the Building Department. If no registration is on file, no inspection will take place.

When applicable, the inspector will verify licensure of all plumbers and registrations for all apprentice plumbers on the job site. Licensee-to-apprentice ratio will be verified at this time as well.

If the worker's do not have a copy of their license and/or registration with them, they will be given an opportunity to provide the necessary documents to the inspector in a reasonable amount of time. If documentation is not received, no further plumbing inspections will take place on the project until the matter is resolved.

Please note:

Teller County's licensing program requires that all plumbing contractors be registered with Teller County Building Department. Criteria for obtaining a registration is that the contractor provide a copy for their current State Licensed Master Plumbing as well as a State Contractor License. Once all criteria is met a registration will be issued and they will be entered in to our electronic contractor data base, which is tied to our permit tracking program.

If a permit application for plumbing work is submitted with an unregistered plumbing company or with an plumbing company with an expired Teller County registration, the permit will not be issued.

If the plumbing inspector conducts an inspection where plumbing work has been done by an unregistered plumbing company, the inspection will be failed. No further plumbing inspections will occur until the matter is resolved.
